MEMORANDUM FOR: AD/OSA

SUBJECT : Possible New Cameras for the U-2

The DCI was so taken by the results of the Perkin-Elmer camera in OX that he immediately inquired into the possibility of installing it in a U-2. He is thinking of possibly using it in Cuba to obviate the necessity for the politically difficult [REDACTED] flights. I told him we had several camera programs going in the U-2, but it is desirable to put this into a rather short staff study listing our various camera configurations that we will be trying, i. e., the C'', the Eastman OX camera, etc. This study should show the distance, weights, whether or not it will fit and any platform stability problems as well as expected resolutions. There probably isn't any rush on this as he is going on leave 1 August.
